DETAILED ACTION

1. In view of the appeal brief filed on June 30, 2003, PROSECUTION IS HEREBY REOPENED. New grounds of rejection are set forth below.

To avoid abandonment of the application, appellant must exercise one of the following two options:

(1) file a reply under 37 CFR 1.111 (if this Office action is non-final) or a reply under 37 CFR 1.113 (if this Office action is final); or,

(2) request reinstatement of the appeal.

If reinstatement of the appeal is requested, such request must be accompanied by a supplemental appeal brief, but no new amendments, affidavits (37 CFR 1.130, 1.131 or 1.132) or other evidence are permitted. See 37 CFR 1.193(b)(2).

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-5 rejected under 35 U.S.C. 102(b) as being anticipated by Menegoli (5504402).

Regarding Claims 1-5. Menegoli discloses a control circuit (Figure 1 item 30 and Figure 2) for controlling the spindle motor in three voltage states (low, pulse and high). Initially the motor braking the switching is turned off for low voltage state (Refer to Figure 2 items 128 and 130; column 5 lines 9-25 and 56-65). Further, when switching is turned on the BEMF voltage, from the motor, is increased (pulse state/high state) (column 2 lines 47-63). The BEMF, from the

Art Unit: 2837

motor, is first reduced when switching is turned on (column 2 lines 47-63), then operating in a high voltage state when the BEMF is increase for braking (column 6 lines 8-32).

Examiner's Response

4. Applicant's arguments in appeal brief with respect to claims 1-5 have been considered but are moot in view of the new ground(s) of rejection.

Examiner requests that the Applicant expound on the low, high and pulse voltage state in the claims and braking in a low state. Further, the control circuit receiving a reduced flyback voltage from the motor in a pulse or high state, this also should be expanded on in the claims. The Applicant should contact the Examiner to discuss the present case for apt prosecution.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tyrone W Smith whose telephone number is 703-306-5987. The examiner can normally be reached on weekdays from 8:30am to 5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert Nappi, can be reached on (703) 308-3370. The fax phone number for the organization where this application or proceeding is assigned is 703-308-3431.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-1782.
